11_Cross_Domain_Remote_Equipment_Policy

Meridian Global Technologies Pvt. Ltd.

Document classification: Internal — Cross-Functional (IT + Finance Access)

Applies to: All hybrid and remote employees **Last reviewed:** January 2026 |

Owner: IT Infrastructure Team & Finance Team (jointly)

---

1. Purpose and Scope

This policy governs equipment provisioning, reimbursement, and asset management for employees working in hybrid or remote arrangements. It is jointly maintained by IT (equipment specification, provisioning, security) and Finance (reimbursement limits, approval, expense processing), and is deliberately cross-referenced from both the IT and Finance policy sets since it does not fit cleanly under either function alone.

2. Equipment Provided by the Company

The Company provides the following equipment directly (via IT provisioning, not reimbursement) to employees in approved hybrid/remote arrangements:

Equipment	Provided By Default	Notes
Laptop	Yes	Per Software & Asset Catalog spec for role
External monitor	Yes, for Engineering/Design roles	On request for other roles, Manager approval
	Yes, for Engineering/Design	

Docking station	roles	On request for other roles
Headset	Yes	Standard issue for all remote employees
Ergonomic chair	No — reimbursed, see Section 3	Not shipped by IT

Equipment provided directly by IT follows the Asset Lifecycle rules in the Software & Asset Catalog document and remains Company property, subject to return upon exit.

3. Home Office Reimbursement (Finance-Administered)

Employees in approved remote arrangements (per the Work From Home Policy in the Leave & Attendance Policy document) may claim reimbursement for home office setup, subject to the following annual caps:

Item	Annual Cap (INR)	Pre-Approval Required
Ergonomic chair	12,000	No, within cap
Desk	8,000	No, within cap
Internet connectivity	1,500/month	No, within cap
Additional monitor (non-Engineering/Design)	10,000	Yes, Manager approval
Minor accessories (mouse, keyboard, webcam)	3,000	No, within cap

Claims are submitted through the Finance portal following the standard Reimbursement Process described in the Finance Policies & Expense Memos document, but require an IT-issued equipment compatibility confirmation for any

item over INR 5,000 before submission, to ensure compatibility with Company security and connectivity requirements.

4. Why This Spans Two Departments

This is one of the few policies in the organization that is jointly owned rather than sitting under a single department:

- **IT's stake:** ensuring any reimbursed equipment (e.g. a monitor, a router) meets security and connectivity standards, and that Company-provided equipment is tracked in the Asset Management system regardless of who requested it.
- **Finance's stake:** ensuring reimbursement amounts stay within approved caps, are processed through standard expense controls, and are correctly categorized for budget reporting.

Employees should direct **equipment specification and compatibility questions** to IT, and **reimbursement status and claim questions** to Finance. A single query spanning both (e.g. "can I get a bigger monitor and how much will I be reimbursed") may require input from both teams — in practice this is handled by IT confirming compatibility first, then Finance processing the claim, as described in Section 3.

5. Security Requirements for Reimbursed Equipment

Any reimbursed equipment that connects to the Company network (routers, docking stations with network passthrough) must meet the minimum security standards published by IT, including current firmware and WPA3 support for routers. Non-compliant equipment already purchased is not eligible for reimbursement — employees are encouraged to check the approved equipment list on the IT portal before purchasing.

6. Asset Tracking for Reimbursed Equipment

Unlike directly provisioned equipment, reimbursed equipment purchased by the employee remains the employee’s personal property and is not tracked in the Company Asset Management system, and is not required to be returned upon exit. This is the key distinction from Section 2 equipment, which remains Company property throughout.

7. Approval Workflow

1. Employee checks the IT portal for equipment compatibility guidance (Section 5) if the item connects to the network or exceeds INR 5,000.
2. Employee submits the expense claim via the Finance portal, referencing this policy.
3. Finance validates the claim against the annual caps in Section 3.
4. For items requiring Manager approval (Section 3), the claim is routed to the employee’s manager before Finance processes payment.
5. Reimbursement is processed per the standard Finance reimbursement timeline (10 working days from approval).
