Meridian Global Technologies Pvt. Ltd.

Document classification: Internal — IT Access Only **Applies to:** IT Team, IT Support Staff **Last reviewed:** January 2026 | **Owner:** IT Infrastructure Team

---

1. Purpose

This document describes how the IT function is organized internally — team structure, escalation chain, and exactly who owns what — complementing the IT Runbooks (which describe *how* to fix things) and the IT Acceptable Use rules (which describe *policy*).

2. IT Team Structure

```
Head of IT
    |
    +-- Infrastructure Team Lead
    |        |
    |        +-- Network Engineers (2)
    |        +-- Systems Administrators (3)
    |
    +-- Application Support Lead
    |        |
    |        +-- App Support Engineers (3)
    |
    +-- IT Security Team Lead (reports jointly to Head of IT and CISO)
    |        |
    |        +-- Security Analysts (2)
    |
    +-- IT Helpdesk Lead
             |
             +-- Helpdesk/Support Technicians (4)
```

Total IT function headcount: approximately 16, supporting roughly 410 employees across three office locations plus remote staff.

3. Helpdesk Tiering

Support requests are handled in tiers, escalating only when the current tier cannot resolve the issue within its scope:

Tier	Handles	Typical Staff
Tier 1 (Helpdesk)	Password resets, access requests, basic hardware/software issues	Helpdesk Technicians
Tier 2 (App/Infra Support)	Application errors, network issues, server-level problems	App Support Engineers, Systems Administrators
Tier 3 (Specialist)	Complex infrastructure issues, security incidents, architecture-level problems	Infrastructure Team Lead, Security Team Lead
Tier 4 (Leadership)	Company-wide outages, vendor escalations, budget/architecture decisions	Head of IT, CTO

A ticket that cannot be resolved within the response-time targets defined in the IT Runbooks (Section 2, Incident Severity Levels) is automatically escalated to the next tier.

4. Who Owns What (Quick Reference)

Area	Owner
Laptop/hardware provisioning	Helpdesk Technicians, per Software & Asset Catalog
Network and connectivity	Network Engineers

Servers and infrastructure	Systems Administrators
Internal applications (non-vendor-managed)	App Support Engineers
Security incidents and access reviews	IT Security Team
VPN and remote access	Network Engineers, escalating to Security for policy exceptions
Software licensing	Infrastructure Team Lead, tracked in Asset Management system

5. Escalation Contacts by Severity

Severity	First Contact	If Unresolved in Target Time
SEV-1 (Critical)	On-call Infrastructure Engineer via paging system	Infrastructure Team Lead, then Head of IT
SEV-2 (High)	On-call App/Infra Support	Relevant Team Lead
SEV-3 (Medium)	Helpdesk ticket, routed by category	Tier 2 owner per Section 4
SEV-4 (Low)	Helpdesk ticket	N/A — resolved within helpdesk SLA

Security incidents (regardless of severity) always route to the Security Team first per the Incident Reporting process in the IT Acceptable Use & Security Rules document, not through the general helpdesk tiering above.

6. Cross-Functional IT Contacts

Situation	

	Who to Involve
New hire needs equipment	Helpdesk (triggered automatically from HR onboarding workflow)
Employee exit needs access revoked	Helpdesk, per the Offboarding Runbook
New department wants a new tool	Infrastructure Team Lead (security review)
Vendor wants system access	IT Security Team (mandatory review before provisioning)

7. On-Call Structure

The Infrastructure and Application Support teams jointly maintain a 24x7 on-call rotation, one engineer per week per function, published on the internal on-call calendar. The Security Team maintains a separate, always-active on-call line specifically for security incidents, since these require immediate response regardless of standard business hours.

8. Common Questions This Document Answers

- **“Who do I contact if my laptop breaks?”** — Helpdesk Technicians (Tier 1), see Section 3.
- **“What’s the structure of the IT team?”** — see Section 2.
- **“Who handles a security incident?”** — IT Security Team directly, bypassing normal tiering (Section 5).
- **“Who approves a new software request?”** — Infrastructure Team Lead, per Section 4 and the Software & Asset Catalog.

9. Contact
